

A COVID-19 Solution: Social Distancing

3VR People Counter System with real-time occupancy detection ensures automatic and highly accurate customer density in the store. Occupancy is displayed on a visible screen. The displays exhibit current occupancy, occupancy limit, and a traffic signal to clearly communicate with customers or visitors when they can or cannot enter.

Why Use the 3VR People Counter?

- High level of precision under changing lighting conditions and shadows
- 3D imaging technology differentiates people and objects
- Accurately record and count the number of people simultaneously
- Differentiates adults and children

Integration with POS and 3VR queue analytics provides an approximate wait time for customers waiting outside the store if the store is currently at full allowed capacity.
